

## <u>Hydraulic Hoses</u>

## <u>R1 / R2</u>

A hydraulic tube is used anywhere in hydraulic systems requiring flexible connection between two fluid ports. A hydraulic tube is a synthetic rubber tube, surrounded by some type of flexible force, which increases the winding power like metal or fibre, and then another rubber is

covered in the body. Reinforcement is curved that gives the tube its flexibility and strength, and these reinforcements can either be braided or spiral lesions.

**Tube:** Hydraulic Oil resistant Special Synthetic Rubber **Reinforcement:** High Tensile Steel 1 Wire Braid **Cover:** Oil, Abrasion and weather resistant wrapped synthetic Rubber

**Application:** For high pressure hydraulic systems in industry and agriculture.

## <u>R3 / R6</u>

A hydraulic tube is used anywhere in hydraulic systems requiring flexible connection between two fluid ports. A hydraulic tube is a synthetic rubber tube, surrounded by some type of flexible force, which increases the winding power like metal or fibre, and then another rubber is covered in the body. Reinforcement is curved that gives the tube its flexibility and strength, and these reinforcements can either be braided or spiral lesions.

**Tube:** Hydraulic Oil resistant Special Synthetic Rubber **Reinforcement:** High Tensile Steel 2 Wire Braids **Cover:** Oil, Abrasion and Weather resistant wrapped synthetic Rubber

**Application:** For high pressure hydraulic systems in industry and agriculture.
