

Modular Controls

04 Series Modular Valves

Hydraulics systems with high flow rates, which 03 series valves (Maximum Flow rate of 70 L/min.) are not capable of handling, 06 series modular valves (may flow rates of 500 L/min.) have been conventionally used. In such cases, the use of 04 series valves for hydraulic systems with flow rates up to 300 L/min. will help to reduce both cost and system size.

06 Series Modular Valves

The modular valves are functional elements with which a hydraulic system can be built easily by stacking them with the mounting bolts. Therefore, no piping is required for the manufacture of the hydraulic systems. Yuken's 06 Series Modular Valves are widely used in hydraulic systems for the various industrial and marine equipment including machine tools, special purpose machines, presses, steel mill equipment and ships.

Cetop 3 Modular Valves

No special skill is required for assembly. Any alteration/addition to the hydraulic circuit can be made quickly and easily. Problems such as oil-leaks, vibration and noise which may be caused by piping are minimized, increasing the reliability of the hydraulic system. Maintenance and system check-ups can be easily carried out as they are normally installed in stackable units.
